QUESTION 3

You are deployed to a rural community to work as the Community Health Nurse there. During your first month in the community, you note that a lot of your clinic patients are suffering from disseminated erythematous skin rashes. In your assessment you realize that the cause of the rash is water which the community is using for bathing and washing that is contaminated by sludge from a nearby mine where some of the community members are employed. Discuss how you would carry out a health promotion plan using the PRECEDE-PROCEED model.

[25 marks]
