

UNIVERSITY OF SWAZILAND
BACHELOR OF SCIENCE

EXAMINATION 2013

TITLE OF PAPER : INTRODUCTORY PHYSICAL CHEMISTRY

COURSE NUMBER : C202

TIME : 3 HOURS

INSTRUCTIONS : THERE ARE SIX QUESTIONS

: ANSWER ANY FOUR QUESTIONS

: BEGIN THE ANSWER TO EACH QUESTION ON
A SEPARATE SHEET OF PAPER

: DATA SHEETS ARE PROVIDED WITH THIS
EXAMINATION PAPER

DO NOT OPEN THIS PAPER UNTIL THE INVIGILATOR INSTRUCTS YOU TO DO
SO.

Question 1 [25 Marks]

- a) With the aid of a detailed sketch of pressure-volume isotherm plot differentiate between a real gas and an ideal gas. Your sketch should include the liquid/gas equilibrium zone, the supercritical fluid region, the critical point, the Boyles temperature and the liquid zone. Your account should make mention of interactions, equations and any necessary theories to help clarify your discussion. [10]
- b) A mixture of butane (C_4H_{10}) and propene (C_3H_6) occupied 35.5 L at 1.000 bar and 405 K. This mixture reacted completely with 220.6 g of O_2 to produce CO_2 and H_2O .
- What was the composition of the original mixture? Assume ideal gas behaviour. MW (O_2)=32 g/mol [8]
 - Calculate the partial pressure, mole fraction of each gas and the total pressure of the final mixture. [7]

Question 2 [25 Marks]

- a) Write short notes on any One of the following:
- Virial equation [10]
 - Van der waal's equation [10]
 - Principle of corresponding states [10]

Use diagrams, equations or plots to clarify your notes where necessary.

- b) A real gas equation of state for a gas is given by:
- $$P = RT(V_m - \beta)^{-1} - (\alpha/T)V_m^{-2} \quad (1)$$
- Derive an expression for $V_{m,c}$, T_c and P_c . [6]
 - Find an expression for the Boyle's temperature, T_B . [3]
 - Estimate the temperature at which oxygen behaves as an ideal gas, T_B given the constants: $\alpha=1.748 \text{ L}^2\text{atm mol}^{-2}\text{K}$ and $\beta= 0.0345 \text{ L mol}^{-1}$. [2]
 - Estimate the radii of real gas molecules using equation (1) for real gases given a critical molar volume of $250 \text{ cm}^3\text{mol}^{-1}$ [2]
- c) Using the critical point expressions for $V_{m,c}$, T_c and P_c express the equation of state (1) in reduced variables [2]

QUESTION 3 [25 marks]

Adiabatic expansion of an ideal gas is quite different from isothermal expansion.

- Explain what is meant by adiabatic expansion, draw an adiabat and an isotherm on a P versus V graph and compare them. [8]
- Derive the expression for the change in temperature of an adiabatic expansion of an ideal gas against constant external pressure from V_i to V_f . [8]

- c) A sample of argon at 1.0 atm pressure and 25°C expands reversibly and adiabatically from 0.50 L to 1.00 L. calculate: [9]
- final temperature
 - work done
 - change in internal energy.

QUESTION 4 [25 MARKS]

- a) Write short notes on **any two** of the following
- enthalpy change [5]
 - internal energy change [5]
 - Hess's Law [5]
- b) To Calibrate a calorimeter a 0.120 g naphthalene, $C_{10}H_8(s)$, was burned at constant volume and it caused the temperature of the calorimeter to rise by 3.05 K. Then 0.10 g of an unknown compound was burned in the same calorimeter, causing a temperature rise of 2.05 K.
- Calculate the heat capacity of the calorimeter [3]
 - Is the unknown compound phenol, $C_6H_5OH(s)$ or ethanol, $CH_3CH_2OH(l)$ whose enthalpies of combustion are $\Delta_c H^\ominus = -3054 \text{ kJmol}^{-1}$ and -1368 kJmol^{-1} respectively. [4]
- c) Calculate the standard enthalpies of formation of:
- $KClO_3(s)$ from the enthalpy of formation of KCl [4]
 - $NOCl(g)$ from the enthalpy of formation of NO [4]
- Given the attached table and the following information:

Question 5 [25 Marks]

- a) Briefly discuss the statistical view of entropy [5]
- b) 1.00 mol of perfect gas at 27°C is expanded isothermally from an initial pressure of 3.00 atm to a final pressure of 1.00 atm. Calculate q , w , ΔS_{sys} , ΔS_{surr} and ΔS_{tot} if the expansion is done:
- reversibly, and [5]
 - against a constant external pressure of 1.00 atm. [5]
 - adiabatically against a constant pressure of 1.00 atm. [5]
- c) If 50g water at 80°C is poured into 100g water at 10°C in an insulated vessel given that $C_{p,m} = 75.5 \text{ JK}^{-1}\text{mol}^{-1}$: Calculate:
- final temperature of the mixture [3]
 - the entropy change [2]

QUESTION 6 [25 MARKS]

- (a) Write short notes on **Any Two** of the following concepts:
- i) Clausius inequality [5]
 - ii) Second law of thermodynamics [5]
 - iii) Third law of thermodynamics [5]
 - iv) Gibbs free energy [5]
 - v) HelmHoltz Function [5]

For each concept include the origin or a short derivation showing its origin, an example where applicable and the role or implication of each of the concepts in thermodynamics.

- (b) Derive the integrated Gibbs-Helmholtz equation [5]

$$\frac{\Delta G_2}{T_2} - \frac{\Delta G_1}{T_1} = \Delta H \left(\frac{1}{T_2} - \frac{1}{T_1} \right)$$

from the fundamental thermodynamic equation of dG

- (c) Given the reaction:

Calculate the change in Gibbs free energy ΔG^θ

- i) at 298 K [2]
 - ii) at 375 K [3]
 - iii) Comment on the significance of the values obtained in (i) and (ii). [2]
 - iv) Using the appropriate data and thermodynamic expression, calculate the maximum expansion work for the reaction at 298 K. [3]
-

Useful Relations				General Data
