

**UNIVERSITY OF SWAZILAND  
SECOND SEMESTER FINAL EXAMINATION 2014**

---

**TITLE OF PAPER** : Applied Spectroscopy

**COURSE NUMBER** : C603

**TIME** : Three Hours

**INSTRUCTIONS** : Answer any FOUR Questions. Each  
Question carries 25 Marks.

---

This Paper contains five (5) pages.

*You must not open this paper until the Chief Invigilator so has granted permission to do.*

SECTION A : MASS SPECTROMETRY AND INFRARED SPECTROSCOPY

**Question 1**

- (a) What fragments might you expect in the mass spectra of the following compounds? Explain how the fragments and their  $m/z$  values arise. [18 marks]

- (b) Assume that you are in the laboratory carrying out the catalytic hydrogenation of cyclohexene to cyclohexane. Explain how you would use a mass spectrometer to determine when the reaction is finished? [7 marks]

**Question 2**

- (a) Two infrared spectra are shown. One is the spectrum of cyclohexane, and the other is the spectrum of cyclohexene. Identify them and explain your answer. [12 marks]

- (b) Assume that you are carrying out the base-induced dehydrobromination of 3-bromo-3-methylpentane to yield an alkene. How could you use IR spectroscopy to tell which of the two possible elimination products is formed. [13 marks]

**Question 3**

- (a) 4-Methyl-2-pentanone and 3-Methylpentanal are isomers. Explain how you could tell them apart both by mass spectrometry and by infrared spectroscopy. [18 marks]

4-Methyl-2-pentanone

3-Methylpentanal

- (b) Assume that you are carrying out the dehydration of 1-methylcyclohexanol to yield 1-methylcyclohexene. Explain clearly how you could use infrared spectroscopy to determine when the reaction is complete. [7 marks]

SECTION B : NUCLEAR MAGNETIC RESONANCE ( $^1\text{H}$  AND  $^{13}\text{C}$  NMR SPECTROSCOPY)

**Question 4**

Briefly describe the following aspects of nuclear magnetic resonance (NMR) spectroscopy.

- |      |   |           |
|------|---|-----------|
| i.   | Theory                                  | [3 marks] |
| ii.  | Nature of NMR absorptions               | [3 marks] |
| iii. | NMR spectra                             | [3 marks] |
| iv.  | Operation of an NMR Spectrometer.       | [3 marks] |
| v.   | Spin-Spin Splitting in $^1\text{H}$ NMR | [3 marks] |

What is the structure of a hydrocarbon that has  $M^+ = 120$  in its spectrum and has the following  $^1\text{H}$ NMR spectrum: 7.25d (5H, broad singlet); 2.9d (1H, septet,  $J=7\text{Hz}$ ); 1.22d (6H, doublet,  $J=7\text{Hz}$ ) (10 Marks)

**Question 5**

Compound A, a hydrocarbon with  $M^+ = 96$  in its mass spectrum, has the  $^{13}\text{C}$  spectral data given below. On reaction with  $\text{BH}_3$  followed by treatment with basic  $\text{H}_2\text{O}_2$ , A is converted into B, whose  $^{13}\text{C}$  spectral data are also given below. Propose structures for A and B.

Compound A [13 marks]

Broadband – decoupled  $^{13}\text{C}$  NMR : 26.8, 28.7, 35.7, 106.9, 149.7  $\delta$

Dept - 90: No peaks

Dept – 135 : No positive peaks; negative peaks at 26.8, 28.7, 35.7, 106.9  $\delta$

Compound B [12 marks]

Broad band-decoupled  $^{13}\text{C}$  NMR : 26.1, 26.9, 29.9, 40.5, 68.2  $\delta$

Dept – 90 : 40.5  $\delta$

Dept – 135 : positive peak at 40.5  $\delta$  ; negative peaks at 26.1, 26.9, 29.9, 68.2  $\delta$

### Question 6

To answer the following questions, consider the data and  $^1\text{H}$  NMR spectrum below. The mass spectrum of this compound shows a molecular ion at  $m/z = 113$ ; the IR spectrum has characteristic absorption at  $2270$  and  $1735\text{ cm}^{-1}$ , and the  $^{13}\text{C}$  NMR spectrum has five (5) signals.

- Based on the mass spectral data and the IR data, what functional groups are present in this compound? [4 marks]
- How many types of non-equivalent protons are there in this molecule? [4 marks]
- Comment or describe the signal at 3.5 delta in terms of integration, splitting pattern and chemical shift. [4 marks]
- Describe the signals at 4.3 delta and 1.3 delta in terms of their integration splitting and chemical shift. [4 marks]
- What is the significance of  $^{13}\text{C}$  NMR data? [4 marks]
- Analyze all the information deduced from the data provided and then propose a structure for this compound? [5 marks]
