## UNIVERSITY OF SWAZILAND

## SUPPLEMENTARY EXAMINATION PAPER 2012

TITLE OF PAPER : DESCRIPTIVE STATISTICS
COURSE CODE : ST 132
TIME ALLOWED : TWO (2) HOURS
REQUIREMENTS : CALCULATOR
INSTRUCTIONS : ANSWER ANY FOUR (4) QUESTIONS

## Question 1

## [25 marks, $4+6+5+5+5]$

(a) The arithmetic mean of 75 observations is 52.6 and the arithmetic mean of 25 similar observations is 48.4; determine the Arithmetic Mean of all 100 observations.
(b) Of 500 students, whose mean height is 67.8 inches, 150 are women. If the mean height of 150 women is 62.0 inches, what is the mean height of the men ?
(c) The electricity tarriff has increased by 12 percent, 8 percent and 16 percent per annum over a three year period. Find the average annual increase in tariff.
(d) If a cyclist travels $50 \mathrm{~km} /$ hour over a stretch of road, and $30 \mathrm{~km} / \mathrm{hour}$ over another hilly 5 km stretch of road, find the average speed over the 10 km distance.
(e) A training consultant is paid E150 per hour for one 8 hour training programme; E120 per hour on a second training programme of 6 hours and E200 for a 2 hour seminar. What is his average earning per hour over the three engagements?

## Question 2

[25 marks, $5+6+4+4+6]$
(a) The following marks were obtained in an examination taken by 100 students:

| Marks | $25-30$ | $30-35$ | $35-40$ | $40-45$ | $45-50$ |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Frequency | 2 | 3 | 7 | 7 | 8 |
| Marks | $50-55$ | $55-60$ | $60-65$ | $65-70$ | $70-75$ |
| Frequency | 25 | 18 | 12 | 10 | 8 |

(i) Estimate the mark exceeded by the top $25 \%$ of the students;
(ii) Suggest a pass-mark if $15 \%$ of the students are to fail.
(b) A woman wants to open a small fashion boutique business. Before selecting a location, she would like to be able to predict the profit in Emalangeni that the store may be expected to earn per square metre of selling space. She gathers the following information:

| Store size <br> (square metres) | Profit <br> (thousand of Emalangeni) |
| :---: | :---: |
| 35 | 20 |
| 22 | 15 |
| 27 | 17 |
| 16 | 9 |
| 28 | 16 |
| 12 | 7 |
| 40 | 22 |
| 32 | 23 |

(i) Find the best fitting regression equation of the form $y=a+b x\left(\sum x^{2}=6246, \sum x y=3781\right.$ and $\sum y^{2}=2313$ ).
(ii) Estimate profit for a store which is 30 square metres.
(iii) Compute the value of the coefficient of determination and interpret its value.

## Question 3

## [25 marks, $15+2+2+3+3$ ]

(a) The number of a certain component issued, per day, from stock over a 40 day period is given as follows:

| 83 | 80 | 91 | 81 | 88 | 82 | 87 | 97 | 83 | 99 |
| ---: | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 75 | 85 | 72 | 92 | 84 | 90 | 87 | 78 | 93 | 98 |
| 86 | 80 | 93 | 86 | 88 | 83 | 82 | 101 | 89 | 82 |
| 85 | 95 | 80 | 89 | 84 | 92 | 76 | 81 | 103 | 94 |

Using class intervals $70-75,75-80,80-85$, etc., draw up a frequency distribution. From the frequency distribution, determine the median and the 7th Decile.
(b) A village grocer's records shows that he sold the following quantities of basic foods at the stated prices in January 1991 and January 1992.

|  | January 1991 |  |  |  | January 1992 |  |  |
| :--- | :---: | :---: | :--- | :--- | :---: | :---: | :---: |
| Product | Price | Quantity |  | Price | Quantity |  |  |
| Milk | 25p per pint | 6000 pints |  | 30p per pint | 6250 pints |  |  |
| Sugar | 44 p per kilo | 2300 kilos |  | 59 p per kilo | 2600 kilos |  |  |
| Tea | 150p per lb | 1600 lbs |  | 165p per lb | 1800 lbs |  |  |
| Bread | 350p per loaf | 4200 loaves |  | 40p per loaf | 4300 loaves |  |  |

(i) Explain why a simple aggregative index would be particularly unsuitable for this data;
(ii) Calculate a simple mean of price relatives index using January 1991 as base time and January 1992 as given time;
(iii) Calculate a weighted mean of price relatives index using January 1991 as base time and January 1992 as given time with base time quantities as weights; and
(iv) What can you say about the index calculated in answer to part (iii)?

## Question 4

(a) The number of claims per quarter on household policies submitted to the George branch of an insurance company is as follows:

| Year | Quarter |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ |
| $\mathbf{2 0 0 3}$ | 84 | 53 | 60 | 75 |
| $\mathbf{2 0 0 4}$ | 81 | 57 | 51 | 73 |
| $\mathbf{2 0 0 5}$ | 69 | 37 | 40 | 77 |
| $\mathbf{2 0 0 6}$ | 73 | 46 |  |  |

Find the seasonal variates.
(b) The following table shows Consumer Price Index (CPI) for the period 2005 to 2009.

| Year | CPI |
| :---: | :---: |
| 2005 | 95 |
| 2006 | 100 |
| 2007 | 104 |
| 2008 | 110 |
| 2009 | 120 |

Compute CPI using 2008 as base year.
(c) In the UK Index of Retail Prices for December 1986 (January 1974=100) the approximate index for beer was around 500 and that for cheese was 400 . Consider the following statements about December 1986:
(i) The price of beer was lower than the price of cheese.
(ii) The price of beer was higher than the price of cheese.
(iii) The change in the price of beer was 20 percent greater than the change in the price of cheese since January 1974.

Which of the statement(s) is/are true?
(d) A careful analysis of the causes for absences in a certain factory shows that the probability that an employee will be absent because of substance abuse is 0.03 ; the probability that the factory manager correctly attributes the absence to substance abuse is 0.80 , and the probability that the factor manager incorrectly attributes the absence of substance abuse is 0.05 . What is the probability that an absence is attributed to substance abuse by the factory manager is actually due to substance abuse?

## Question 5

[25 marks, $5+5+5+5+5]$
(a) The summary statistics for two data sets are as follows:

|  | Sample size | Sample mean |
| :--- | :---: | :---: |
| $\mathbf{X}$ data | 19 | 7.0 |
| $Y$ data | 25 | 5.1 |

Compute the mean of the combined data sets.
(b) A police officer classifies a total of 150 reported crimes in 2009 by age (in years) of the criminal and whether the crime is violent or non-violent.

|  | Age (in years) |  |  |
| :--- | :---: | :---: | :---: |
| Type of crime | Under 20 | 20 to 40 | Over 40 |
| Violent | 27 | 41 | 14 |
| Non-violent | 12 | 34 | 22 |

You must define the respective event(s) in each case and must use one of the probability rules to compute the following probabilities:
(i) What is the probability of selecting a case to analyse and finding the crime was committed by some one 40 or less than 40 years old?
(ii) What is the probability of selecting a case that involved a violent crime or an offender less than 20 years old?
(iii) Given that a violent crime is selected for analysis, what is the probability the crime was committed by a person under 20 years old?
(iv) Two crimes are selected for review by a Judge. What is the probability that both are violent crime?
