

UNIVERSITY OF ESWATINI

MAIN EXAMINATION PAPER 2018

- TITLE OF PAPER :** **PROBABILITY THEORY I**
- COURSE CODE :** **STA211**
- TIME ALLOWED :** **2 HOURS**
- INSTRUCTIONS :** **ANSWER ANY THREE QUESTIONS.**
- REQUIREMENTS :** **SCIENTIFIC CALCULATOR AND
STATISTICAL TABLES.**

Question 1

- A cell-phone tower has a circular coverage area of radius 10 Km. If a call is initiated from a random point in the coverage area, find the probability that the call comes from within 2 Km of the tower.
- Consider the duration of a cell-phone call. For the sample space $\Omega = [0, \infty)$, find the probability that the duration is between 5 and 7 minutes.
- Three bits are transmitted across a noisy channel and the number of correct receptions is noted. Find the probability that the number of correctly received bits is two, assuming bit errors are mutually independent and that on each transmission the probability of correct reception is λ for some fixed $0 \leq \lambda \leq 1$.
- The number of hits to a popular website during a 1-minute interval is given by the random variable X_i . Find the probability that there is at least one hit between 3:00 a.m and 3:01 a.m if the rate parameter is 2 hits per minute. Then find the probability that there are at least 2 hits during this time interval.

(5+5+5+5 Marks)

Question 2

- Due to an Internet configuration error, packets sent from Mbabane to University of Eswatini are routed through Ntontozi with probability $3/4$. Given that a packet is routed through Ntontozi, suppose it has probability $1/3$ of being dropped. Given that a packet is not routed through Ntontozi, suppose it has probability $1/4$ of being dropped.
 - Find the probability that a packet is dropped.
 - Find the probability that a packet is routed through Ntontozi when it is not dropped.
- An electrical system consists of four components.

The system works if components A and B work and either of the components C or D works. The reliability (probability of working) of each component is also shown in the graph. Find the probability that

- The entire system works

- ii. component C does not work, given that the entire system works. Assume that the four components work independently.

(5+5 Marks)

Question 3

- a) Let X denote the life time (in hundreds of hours) of a certain type of electronic component. These components frequently fail immediately upon insertion into the system. It has been observed that the probability of immediate failure is 1/4. If a component does not fail immediately, the life-length distribution has the exponential density:

$$f(x) = \begin{cases} e^{-x}, & x > 0 \\ 0 & \text{Otherwise} \end{cases}$$

Find the distribution function for X and evaluate $P(X > 10)$.

(10 Marks)

- b) If X is a random variable characterized by the pdf $f(x) = \lambda e^{-\lambda x}$, $x > 0$ and with parameter $\lambda = 1$. Show that k^{th} moments of X is $k!$.

(10 Marks)

Question 4

- a) A company prices its hurricane insurance using the following assumptions:
- In any calendar year, there can be at most one hurricane.
 - In any calendar year, the probability of a hurricane is 0.05.
 - The number of hurricanes in any calendar year is independent of the number of hurricanes in any other calendar year.

Using the company's assumptions, calculate the probability that there are fewer than 3 hurricanes in a 20-year period.

(10 Marks)

- b) An insurance policy on an electrical device pays a benefit of 4000 if the device fails during the first year. The amount of the benefit decreases by 1000 each successive year until it reaches 0. If the device has not failed by the beginning of any given year, the probability of failure during that year is 0.4. What is the expected benefit under this policy?

(10 Marks)

Question 5

- a) The probability function for random variable X is

$$f(x) = \begin{cases} 2^{-x}, & x = 1, 2, \dots \\ 0, & \text{otherwise} \end{cases}$$

Find the probability function of a random variable $U = X^4 + 1$.

(10 Marks)

- b) The probability function of a random variable X is given by

$$f(x) = \begin{cases} x^2/18, & -3 < x < 6 \\ 0, & \text{otherwise} \end{cases}$$

Find the probability function for the random variable $U = \frac{1}{3}(12 - X)$.

(10 Marks)

The table entry for z is the area to the left of z.

TABLE 5 Areas of a Standard Normal Distribution

(a) Table of Areas to the Left of z
